Instalación de vsftpd

```
vboxuser@Ubuntu:~$ sudo apt install vsftpd -y
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
The following packages were automatically installed and are no longer
  libwpe-1.0-1 libwpebackend-fdo-1.0-1
Use 'sudo apt autoremove' to remove them.
The following NEW packages will be installed
  vsftpd
0 to upgrade, 1 to newly install, 0 to remove and 0 not to upgrade.
```

Configuración básica

```
GNU nano 6.2 /etc/vsftpd.conf *
listen=NO
#
# This directive enables listening on IPv6 sockets. By default, listening
# on the IPv6 "any" address (:::) will accept connections from both IPv6
# and IPv4 clients. It is not necessary to listen on *both* IPv4 and IPv6
# sockets. If you want that (perhaps because you want to listen on specific
# addresses) then you must run two copies of vsftpd with two configuration
# files.
listen_ipv6=YES
#
# Allow anonymous FTP? (Disabled by default).
anonymous_enable=NO
#
# Uncomment this to allow local users to log in.
local_enable=YES
#
# Uncomment this to enable any form of FTP write command.
write_enable=YES
#
# Default umask for local users is 077. You may wish to change this to 022,
```

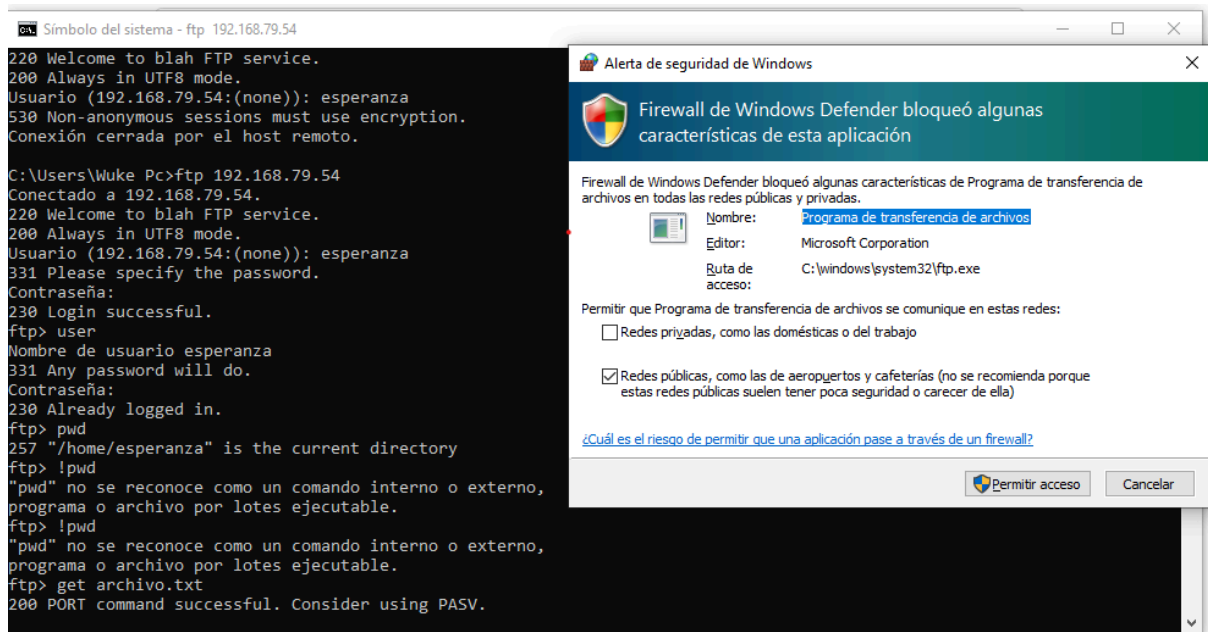

<b>^G</b> Help	<b>^O</b> Write Out	<b>^W</b> Where Is	<b>^K</b> Cut	<b>^T</b> Execute	<b>^C</b> Location
<b>^X</b> Exit	<b>^R</b> Read File	<b>^_</b> Replace	<b>^U</b> Paste	<b>^J</b> Justify	<b>^/</b> Go To Line

Descomente las configuraciones necesarias y añadi una configuración extra necesaria que no pone en la diapositiva pero que Azael me dijo que era la encriptación para que no sea necesaria.

**force\_local\_data\_ssl** y **force\_local\_logins\_ssl** en **NO** permiten conexiones sin cifrado.

```
# Uncomment this to indicate that vsftpd use a utf8 filesystem.
utf8_filesystem=YES
anon_max_rate=524288
local_max_rate=1048576
max_per_ip=2

force_local_data_ssl=NO
force_local_logins_ssl=NO
```

```
ftp> put archivo.txt
200 PORT command successful. Consider using PASV.
150 Ok to send data.
226 Transfer complete.
ftp>
```
