Actividad 1 - Tema 3 - VHOST

¡El Virtual Host funciona correctamente!

```
NameVirtualHost *
<VirtualHost *:80>
   DocumentRoot "C:\xampp\htdocs"
   ServerName localhost
   <Directory "C:\xampp\htdocs">
        Options Indexes FollowSymLinks
        AllowOverride All
        Require all granted
    </Directory>
</VirtualHost>
<VirtualHost *:80>
   DocumentRoot "C:\xampp\htdocs\mi-sitio"
   ServerName mi-sitio.local
    <Directory "C:\xampp\htdocs\mi-sitio">
        Options Indexes FollowSymLinks
       AllowOverride All
        Require all granted
    </Directory>
</VirtualHost>
```

```
# Copyright (c) 1993-2009 Microsoft Corp.
# This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
# This file contains the mappings of IP addresses to host names. Each
# entry should be kept on an individual line. The IP address should
# be placed in the first column followed by the corresponding host name.
# The IP address and the host name should be separated by at least one
# space.
# Additionally, comments (such as these) may be inserted on individual
# lines or following the machine name denoted by a '#' symbol.
# For example:
      102.54.94.97
                      rhino.acme.com
                                                # source server
#
       38.25.63.10 x.acme.com
                                                # x client host
# localhost name resolution is handled within DNS itself.
       127.0.0.1 localhost
       ::1
                       localhost
       127.0.0.1 mi-sitio.local
127.0.0.1 localhost
```
